Atliq Contract Risk Analyzer

# What we build, and what we leave out

Impact vs feasibility for the eight capabilities scored in Deliverable 2. The AI reads and flags; a person decides and signs.

## The eight capabilities

**1** Obligations register *(Big bet)*

**2** Conflict check vs past commitments *(Big bet)*

**3** Clause-by-clause review *(Big bet)*

**4** Entity and law check *(Fill-in)*

**5** Missing-documents check *(Fill-in)*

**6** Mutual / one-sided check *(Quick win)*

**7** Queue triage *(Deprioritise)*

**8** Deal notes and meeting minutes *(Big bet)*

Built in V1: 1, 2, 3, 4, 5, 6 and 8. Queue triage (7) scored lowest and is deferred. Quadrant lines at 6.5 on both scales.

## The AI should

- Read every clause and say how many were reviewed (N of N)
- Compare with AtliQ's principles and past contracts
- Show serious first, then negotiable, then minor
- Match a new deal against past commitments
- Check whether "mutual" terms are really mutual
- Say what it could not read or check

## The AI should never

- Sign, approve, reject or act on its own
- Say "safe to sign" or "no conflict"
- Give legal advice or judge enforceability
- Send anything outside AtliQ
- Give one risk score or colour rating
- Hide uncertainty or skip a clause silently

## Not in V1

Employee contracts, client legitimacy checks, counter-wording, queue triage, expiry alerts, mailbox sync, mobile app.
